WEATHER OF CONCERN

Weather of Concern

- A series of storm systems will bring rain, mountain snow, strong winds, and small hail to California and the Pacific Northwest.

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

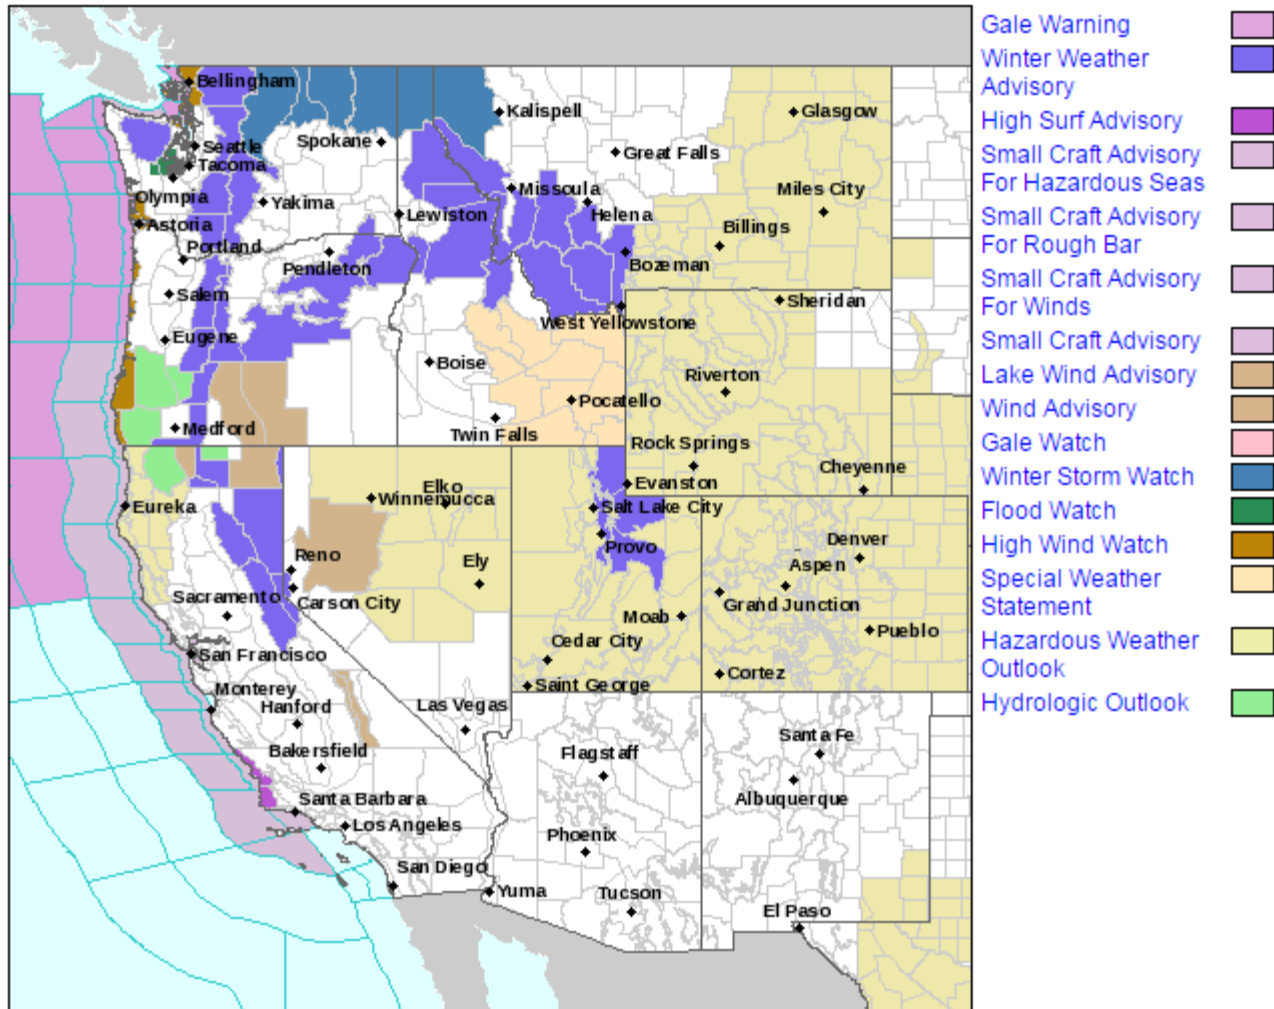

NORTHERN CALIFORNIA

The next 7 days will be wet and unsettled as a series of cold Pacific storms and cold fronts move across the region about every other day. The next storm will arrive later today and end Wednesday evening. The second storm will arrive late Thursday night or early Friday and come to an end early Saturday, followed by the third storm later Sunday through Monday. Snow levels will generally be 5000 feet and above as each system arrives, and drop to 3000-5000 feet once each cold front passes. As each system approaches southerly winds along and ahead of the cold front will gust to 20-30 mph in open areas with peak winds in wind-prone areas reaching 35-45 mph. Temperatures will be normal to below normal each day.

SOUTHERN CALIFORNIA

A weak ridge of high pressure will bring near normal temperatures today with mid 40s to mid 50s across the mountains, mid 50s to mid 60s in the valleys of Central California, and mid 60s to mid 70s in the valleys of Southern California. Minimum humidity will be mainly between 30% and 50% and winds will be light across the area today. A Pacific trough will bring scattered showers with less than a quarter inch of rainfall from a Monterey/Fresno County line northward Wednesday morning. The snow level will be around 6,000 feet. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the Tehachapi Mountains, the Antelope Valley, and the Banning Pass Wednesday morning through Wednesday afternoon. Northwest to northeast winds of 20 to 30 mph with gusts to 50 mph will set up from Santa Barbara County eastward into western Los Angeles County Wednesday afternoon through Wednesday night. Temperatures will cool a little across Central California and the mountains Wednesday. However, little or no change in temperature is expected across the coastal and valley locations of Southern California. Minimum humidity will drop to 15% to 30% across Southern California Wednesday. A weak ridge of high pressure will bring some warming along with minimum humidity in the single digits and teens to most of the region Thursday. The most notable warming will occur across the coastal and valley areas of Southern California, where offshore flow will cause some locations to warm into the low 80s. Northeast to east winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California Thursday morning through Thursday afternoon. A couple of Pacific troughs will drop down the West Coast bringing cooling and higher humidity to the area Friday through this weekend. Showers will move across Central California starting Friday night and across Southern California starting Saturday night. Showers will end across the region Sunday night. Strong westerly winds will surface across the mountain ridges and desert passes this weekend. A ridge of high pressure will build into California from the Pacific Ocean bringing warming and drying to the region early next week.
